

NOTES:
Water supply:
Toilets will not have a water connection. The "bucket system" is to be used. Bucket filling taps are provided in each toilet. (This simplifies the system and reduces maintenance.)

Only cold water will be supplied to the building.

Water pressure to the taps will be low. This can be improved in the future by lifting the water tank onto a tower.

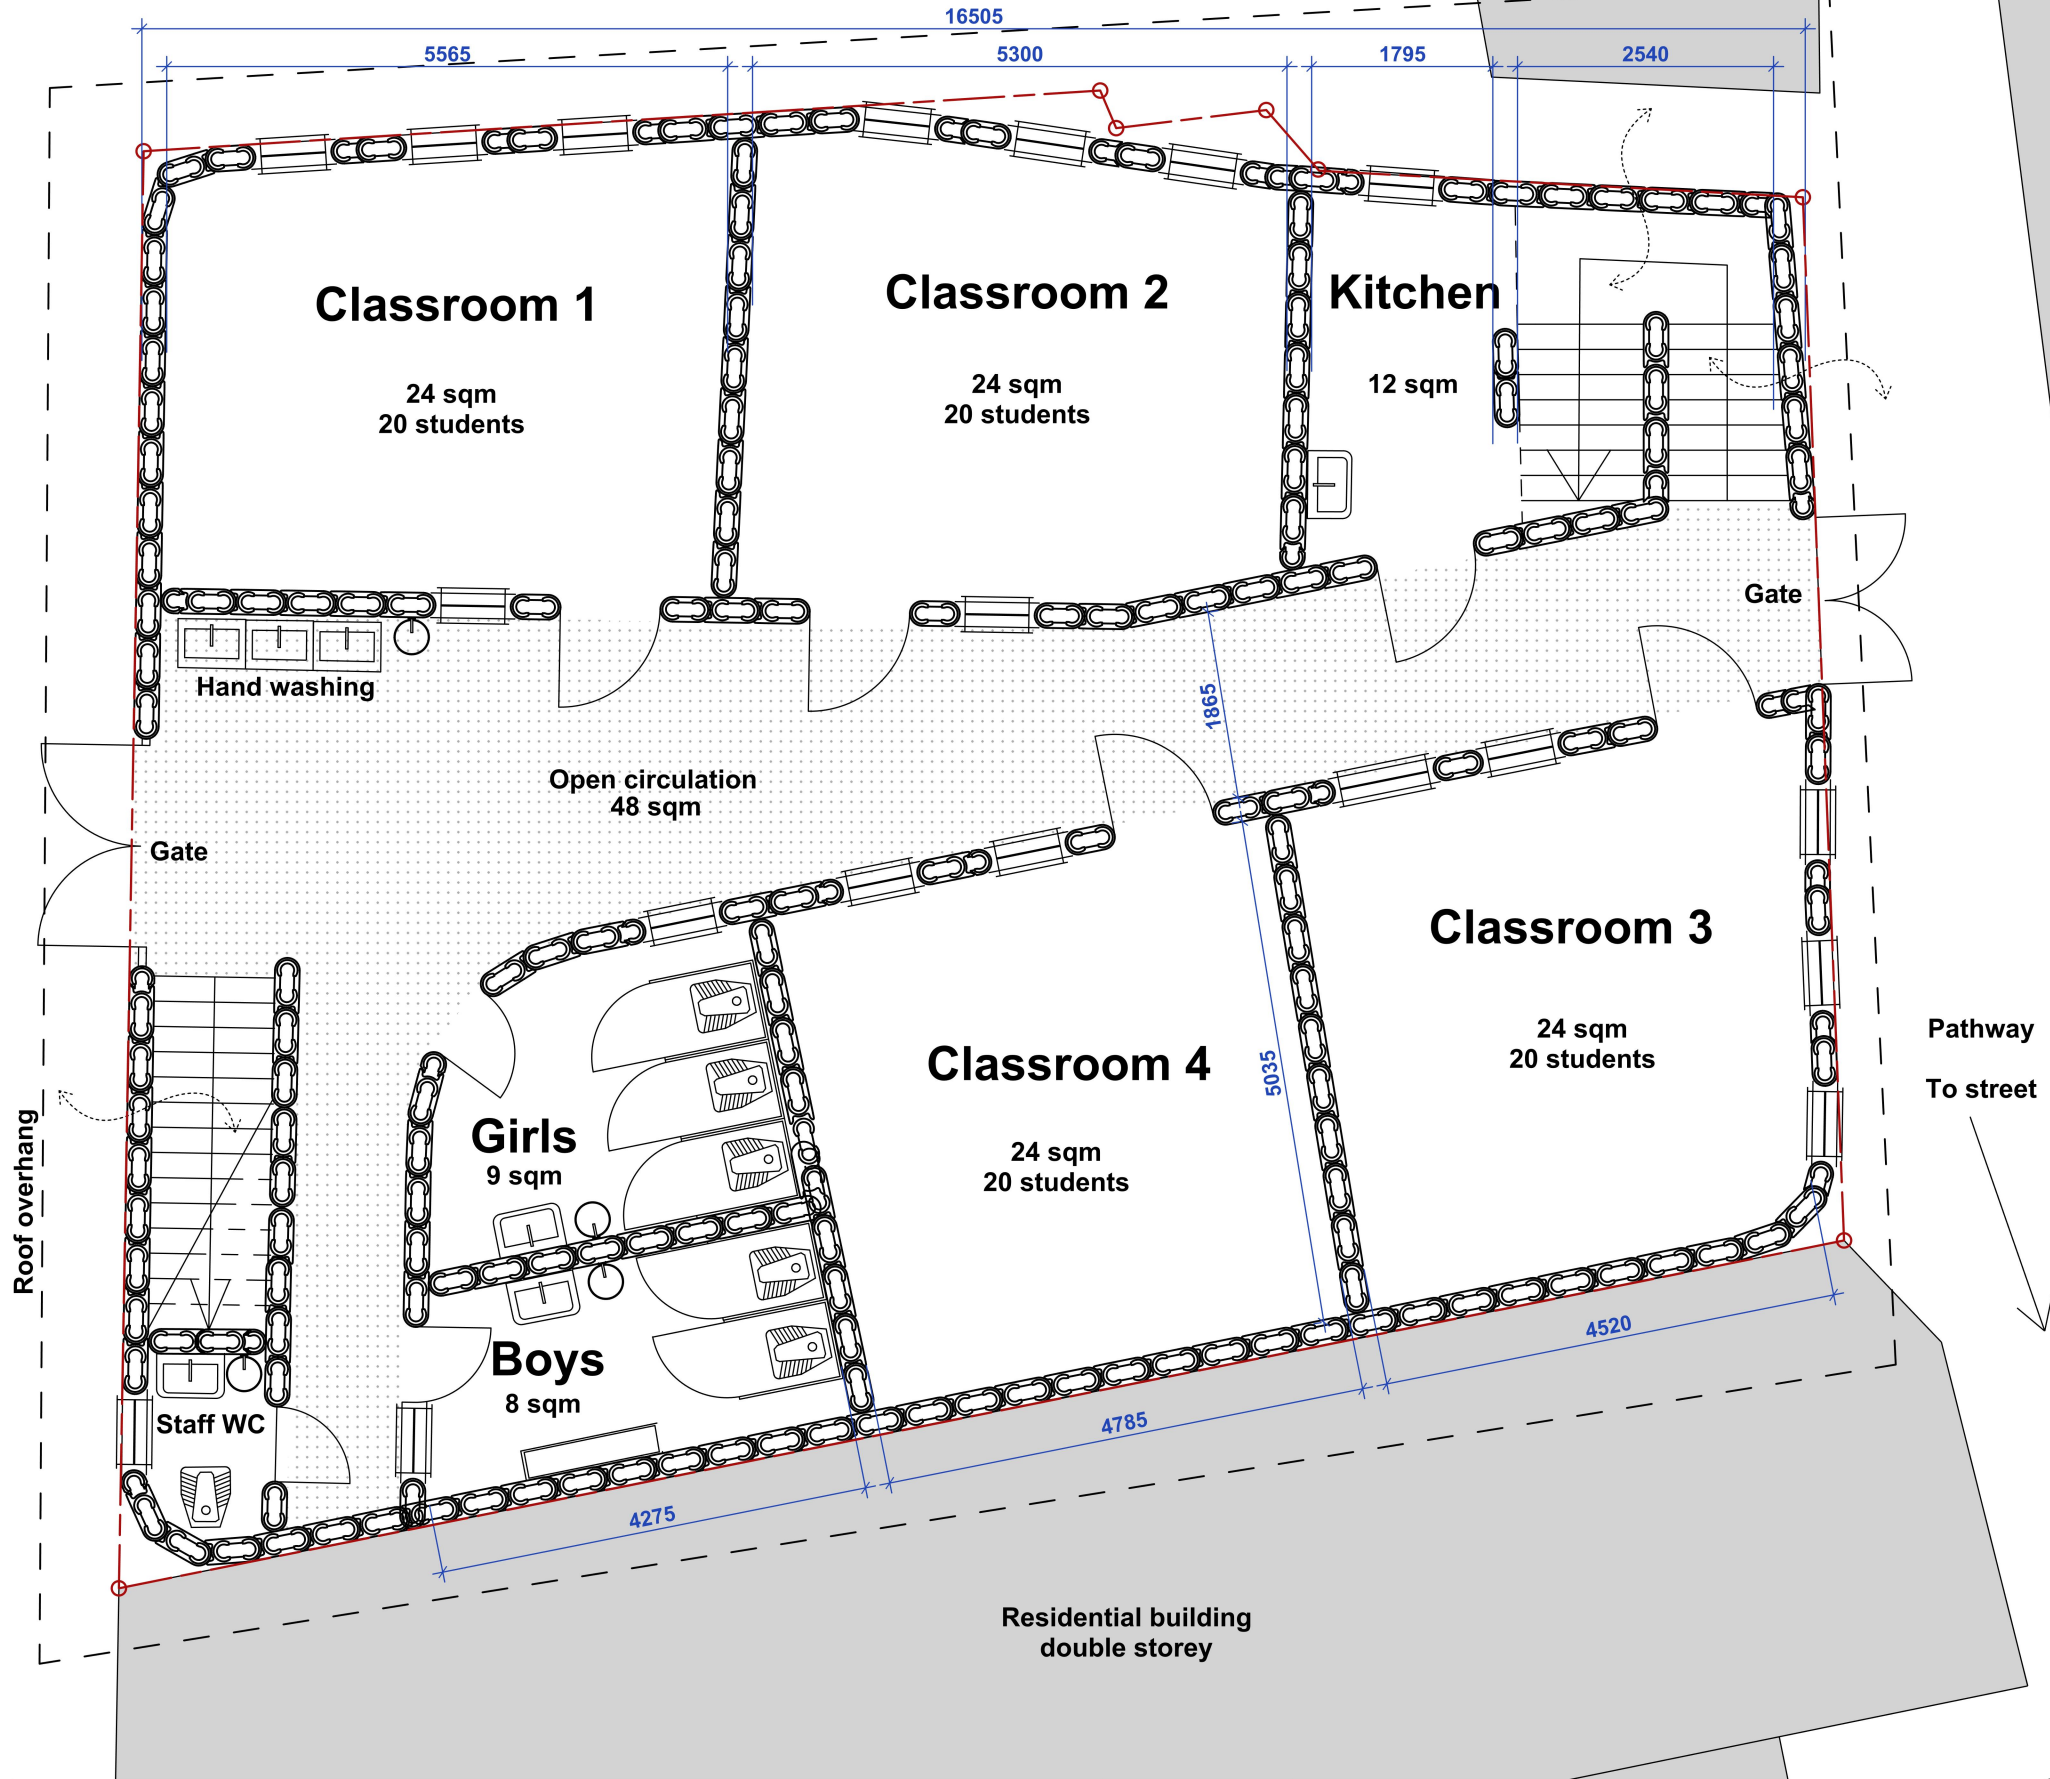

Finishings:
Rooms will have concrete floors, ceilings and un-painted TwistBlock walls.

No kitchen furniture or equipment will be provided.
No classroom fittings are provided such as black boards.

Changes:
These plans are subject to change with design development.

Signatures:
Signing of these plans indicates that you understand and accept the design.
